Education

California State University, Long Beach
Bachelor of Science: Computer Science

Overall GPA : 4.00
Expected: May 2026

Relevant Coursework:

- Database Fundamentals (SQL, MongoDB)
 - Machine Learning (Data Mining, Decision Trees, Model Evaluation)
 - Software Development Frameworks (C#, ASP.NET, Entity Framework, Avalonia)
-

Experience

FreightGate, Fountain Valley, CA

Programming Intern

Jul 2025 - Sep 2025

- Integrated a Stripe payment processing into a full-stack web application, developing both frontend and backend features and storing transactional data in MySQL.
- Converted the program into the Perl language to ensure compatibility with pre-existing legacy systems.
- Utilized APIs to implement application features from various shipping companies such as EasyShip, and designed database schemas for testing kits.

NAVSEA, Corona, CA

NREIP Research Intern

Oct 2025 - Dec 2025

- Helped with the design and planning of a secure document management system for tracking Navy approval chains and workflow using internal tools.
 - Utilized SharePoint, Modeling tools, and other Microsoft software to diagram and model final proposal.
-

Skills

Programming / Coding Languages: Python, C#, GDScript, C++, C, Javascript, Typescript, SQL, Kotlin

Tools / Frameworks: VS Code, CLion, PyCharm, Visual Studio, Godot Engine, MongoDB, Avalonia, Docker, Entity Framework, ASP.Net, Android Studio, Svelte, React

Libraries: SQLAlchemy, Matplotlib, Scikit-learn

Projects

Portfolio Website (<https://jeffrhua.github.io/portfolio/>)

- Developed a portfolio website using React, NextJs, TypeScript, and Tailwind CSS to serve as a centralized site for other projects and technical work.

Listing Tracker Discord Bot

- Developed a Discord bot using JavaScript that listens and filters for new listings from the BP.TF API, creating embeds for potential good deals.

Chess Application / Bot (<https://github.com/Jeffrhua/Random-Projects/tree/main/Chess>)

- Implements a C# application following the book "C#eckmate".
- Builds a UI application using Avalonia.

School Database System - Database Fundamentals

- Created a database system design and implementation using both SQLAlchemy / MongoDB tracking new majors, departments, enrollments, and students.
